

## Rainstorm Lesson Plan

ChARL

May 2020

### Agenda

- Introduction (5 mins)
  - What are people thinking and talking about with regards to climate change?
  - What do they think are the most effective solutions for addressing climate change? (As a series of hypotheses)
- Using the Climate EN-ROADS Simulator (40 mins)
  - Link to Resource: <https://www.climateinteractive.org/tools/en-roads/>
  - The facilitator would be using the simulator to test the effects that different climate change mitigation strategies have on reducing carbon emissions to yield a useful side-by-side comparison.
  - Note: I have been trained before on using this simulator, so the lesson itself will be fairly straightforward to plan and facilitate.
- Concluding Thoughts (10 mins)
  - Discussion on what students took away from the lesson.
  - How will COVID-19 impact the success of these strategies?
